

OVERVIEW

Solar SCANPRO is a software package designed to collect data from optical marks (bubbles, checkboxes) and barcodes on plain forms. The software works in conjunction with an image scanner to collect the data. Solar SCANPRO allows you to create your own forms with whatever software package you feel comfortable using (e.g., a word processing package, survey design package, etc.). You are allowed a great deal of flexibility in the design process. The forms do not need special marks or printing, and respondents do not need the use a number 2B pencil to fill in the forms.

FEATURES

- Exceptional OMR (Optical Mark Recognition)
- Works with forms you create on plain paper
- Work with Konica Minolta MFP for print and scan
- Recognizes barcodes in any orientation
- User-friendly, spreadsheet-style interface
- Automatic form identification and database verification
- Collates double-sided, multi-page forms
- Grades tests & tallies surveys
- Produces customizable graphs of grade/tally results and statistics
- Ability to add question text to make analysis more useful
- Exports data to any spreadsheet, database, or statistical package including: SPSS, Access, Excel, dBase, Lotus and Paradox (over 30 different file formats), HTML file format for publishing data to the internet
- On-line error correction & entry of handwritten comments
- Recognizes low quality images
- Batch mode for unattended data entry
- Easy-to-use Windows interface and context sensitive help available by pressing F1 in all windows

WHO USES SOLAR SCANPRO?

- Education Professionals for student testing, institutional research or community surveys, attendance sheet record.
- Marketing Professionals for consumer surveys.
- Psychology Professionals for testing, assessments and evolutions.
- Government Agencies for data compilation from internal and external sources.
- Healthcare Industry for customer surveys, patient data and research.
- Pharmaceutical companies for clinical trials and product evolution.
- Police Departments for racial profiling compliance and community surveys.
- Computer Professionals for combination or integration with another software package.
- Human Resource Departments for employee surveys, time sheets and evaluations
- Training Professionals for course and instructor evaluations and tracking, and any more.

1. Create Form

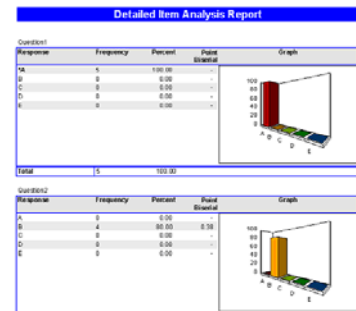

Create your own forms with whatever software package you feel comfortable using (e.g. Word processing packages, survey design package, etc)

2. Scan Form

Data collected immediately as scan

3. Results

Immediate analysis results. Eliminate data entry and allows data mining. Spend qualitative time making decision instead of data entry.
